1. Introduction

ShiftFlow digitizes shift operations inside Odoo: shifts are planned and tracked, events are logged, incidents get owners and severities, follow-up tasks stay visible across shift changes, and the outgoing team transfers outstanding work to the incoming team through an explicit accept/reject handover. A live operations dashboard consolidates KPIs, charts and watch lists.

Key concepts: **Team** (crew + supervisor), **Shift** (dated work period), **Log** (timestamped note), **Incident** (problem with severity and owner), **Task** (dated action with responsible), **Handover** (transfer package between two shifts).

2. Installation & requirements

- 1 Copy the **shiftflow** folder into your Odoo addons path.
- 2 Update the Apps list (Settings → Apps → Update Apps List).
- 3 Install **ShiftFlow - Digital Shift Handover**. Only **base** and **mail** are required; it works on Odoo 19 Community and Enterprise.
- 4 Demo data (teams, shifts, incidents, tasks) is included for evaluation.

References auto-numbering is configured: shifts SHF/, incidents INC/, tasks TSK/, handovers HO/.

3. Access rights & menus

Two roles exist: **ShiftFlow User** (create and edit operational records, no deletion) and **ShiftFlow Manager** (full rights, including teams configuration and analysis views). Assign them in Settings → Users & Companies → Users.

Menu	Content
ShiftFlow → Operations Dashboard	Live KPIs, charts and watch lists
ShiftFlow → Operations → Shifts	Shift board (kanban / list / form)
ShiftFlow → Operations → Shift Handovers	Transfer packages between shifts
ShiftFlow → Operations → Operational Log	Timestamped shift notes
ShiftFlow → Operations → Incidents	Incident board + analysis (graphs, pivots)
ShiftFlow → Operations → Follow-up Tasks	Dated actions with overdue detection
ShiftFlow → Analysis → Incident Analysis	Graphs and pivots (managers)
ShiftFlow → Configuration → Teams	Crews, members and supervisors (managers)

4. Teams

- 1 Open **Configuration** → **Teams** and create one team per crew (name, code, manager, members).
- 2 Assign a supervisor: he will receive handover acceptance requests and alerts.
- 3 Deactivate a team with **Active** instead of deleting it to keep history.

5. Shift lifecycle

Create a shift with date, start/end time and team. Two shifts of the same team may never overlap — the system refuses double-booking. Previous/next shifts of the team are linked automatically.

From	Button	To	Checks
Draft	Start Shift	Active	Only from draft.
Active	Prepare Closing	Closing	Only from active.

From	Button	To	Checks
Active / Closing	Close Shift	Closed	Only from active or closing.
Closing / Closed	Prepare Handover	(opens handover)	Shift must be closing or closed.
Any but Closed	Cancel	Cancelled	A closed shift cannot be cancelled.

The shift form shows live counters (Logs, Incidents, Tasks) as clickable stat buttons, plus notebook tabs listing each category editable inline.

6. Operational logs

Record timestamped notes during the shift: **Note, Event, Observation, Information**, with priority **Low** → **Critical**, author and attachments. High and Critical logs are automatically collected into the shift handover.

7. Incident management

From	Button	To	Checks
Open	(creation)	Open	Severity, owner and description required.
Open	Investigating (change state)	Investigating	—
Any open	Monitoring (change state)	Monitoring	—
Any	Resolve	Resolved	Resolution date is stamped.
Resolved / Cancelled	Reopen	Open	Clears the resolution date.
Any	Cancel	Cancelled	—

- Severity scale: **Low, Medium (default), High, Critical**.
- Tick **Carry to Next Shift** on any incident that must survive the shift change.
- Critical open incidents automatically trigger an **email + to-do activity** to the owner (every 15 minutes until flagged as alerted).
- Kanban, list, graph (by severity) and pivot (severity × status) views are built in.

8. Follow-up tasks

- Priorities **Low, Normal (default), High, Urgent**; states **Open** → **In Progress** → **Done** (+ Cancelled, Reopen).
- A task past its deadline (and not done/cancelled) is flagged **overdue** (red badge) and the responsible receives an **automatic email reminder + activity** (daily).
- Tick **Carry to Next Shift** so handover acceptance duplicates the task into the incoming shift.

9. Shift handovers

From	Button	To	Checks
Draft	Prepare Handover	Prepared	Collects carry-over incidents, open tasks and high/critical logs automatically.

From	Button	To	Checks
Prepared	Send for Acceptance	Waiting Acceptance	An incoming shift is required; its supervisor gets a to-do activity.
Waiting	Accept Handover	Accepted	Only the incoming supervisor, the team manager or a ShiftFlow Manager. Carry-over items are duplicated.
Waiting	Reject / Request Clarification	Rejected	A reason is mandatory.

On acceptance, open carry-over incidents and tasks are **duplicated into the incoming shift** (linked via carried-from / carried-to), so nothing is lost between crews. Print the handover at any time with the built-in **Shift Handover Report (PDF)**: reference, shifts, items table and summary.

10. Operations dashboard

Menu **Operations Dashboard** (client action *shiftflow_dashboard*): current shift and team, 7 KPI cards (today's shifts, open/critical incidents, overdue tasks, waiting handovers, carry-over items, resolved 7 days), severity bars, task-status donut, 7-day activity chart, open-incident and overdue-task watch tables, waiting-handover list. Every card and row opens the underlying records. Use **Refresh** when operational conditions change.

11. Emails & scheduled actions

Cron (daily/hourly)	Effect
ShiftFlow: Overdue Task Reminder (daily)	Emails + activities for overdue tasks not yet reminded.
ShiftFlow: Critical Incident Alert (every 15 min)	Emails + activities for unalerted critical incidents.

Templates used: *ShiftFlow - Overdue Task Reminder* (to the responsible) and *ShiftFlow - Critical Incident Alert* (to the owner). Both are editable in Settings → Technical → Email Templates.

12. Handover PDF report

On any handover, use **Print** → **Shift Handover Report**: header (reference, outgoing/incoming shifts, preparer), items table (type, description, priority, carry-over) and the summary paragraph — suitable for signatures and archiving.

13. FAQ & troubleshooting

- **Cannot start a shift?** It must be in Draft, and its time range must not overlap another shift of the same team.
- **Cannot prepare a handover?** Move the shift to Closing first (or Close it).
- **Cannot accept?** Only the incoming supervisor, the team manager or a ShiftFlow Manager can accept.
- **Cannot send?** Prepare first, and select an incoming shift of the same team starting after the outgoing shift ends.
- **Overdue badge missing?** The deadline must be in the past and the state neither Done nor Cancelled.
- **No email received?** Check the owner/responsible has an email address and the outgoing mail server works (Settings → Technical).
