1. Introduction

1.1 About This Manual

Welcome to the Smart Financial Dashboard - CFO Pack Pro User Manual. This comprehensive guide will help you maximize the value of your financial analytics platform. Whether you are a CFO, financial controller, analyst, or business owner, this manual provides step-by-step instructions for leveraging all features of the dashboard.

The manual is organized by functional area, making it easy to find information relevant to your specific needs. Each section includes practical examples and best practices to help you make data-driven financial decisions.

1.2 Who Should Use This Module

This module is designed for:

- **Chief Financial Officers (CFOs):** Strategic financial planning and oversight
- **Financial Controllers:** Day-to-day financial management and reporting
- **Financial Analysts:** Detailed analysis and forecasting
- **Business Owners:** High-level business performance monitoring
- **Accountants:** Financial data validation and reporting
- **Executive Management:** Key metrics for decision making

1.3 Key Features Overview

- **Executive Cockpit:** Real-time dashboard with 15+ key financial metrics
- **Cash Flow Forecast:** 180-day intelligent projections with ML-based predictions
- **Profitability Analysis:** Multi-dimensional margin analysis by product, customer, and project
- **Risk Management:** Automated risk scoring and payment behavior analysis
- **Multi-Company Consolidation:** Group-level financial reporting with intercompany elimination
- **Smart Alerts:** Proactive notifications when thresholds are breached

2. Getting Started

2.1 Accessing the Dashboard

After successful installation, access the CFO Dashboard from the main Odoo menu:

1. Log in to your Odoo instance with appropriate credentials
2. Look for "CFO Dashboard" in the main menu bar (top of screen)
3. Click on "CFO Dashboard" to expand the menu
4. Select "Executive Cockpit" to access the main dashboard

Note: If you do not see the CFO Dashboard menu, contact your system administrator to verify that you have the correct user permissions.

2.2 Navigation Overview

The CFO Dashboard module includes the following main sections:

- **Executive Cockpit:** Main dashboard with all KPIs and quick insights
- **Cash Flow Forecast:** Detailed cash flow projections and scenario planning
- **Profitability Analysis:** In-depth margin analysis across multiple dimensions
- **Risk Analysis:** Customer and supplier risk scores and alerts
- **Consolidation:** Multi-company financial consolidation
- **Alerts:** View and manage all active financial alerts
- **Configuration:** System settings and threshold configuration

2.3 User Permissions

The module includes two user permission levels:

- **CFO Dashboard / User:** Read-only access to all dashboards and reports. Can view KPIs, forecasts, and alerts but cannot modify configurations.
- **CFO Dashboard / Manager:** Full access including configuration, manual recalculations, and system settings.

Note: Your system administrator controls which permission level you have. Contact them if you need different access rights.

3. Executive Financial Cockpit

3.1 Understanding the Dashboard

The Executive Financial Cockpit is your command center for financial insights. It presents the most critical metrics at a glance, organized into three main categories:

- **Profitability Metrics:** Revenue, margins, and operational efficiency
- **Liquidity & Cash Flow:** Current cash position and future projections
- **Risk Indicators:** Payment behavior and concentration risks

The dashboard automatically refreshes every 5 minutes while you have it open. You can also manually refresh at any time using the "Refresh" button in the top right corner.

3.2 Key Performance Indicators

The dashboard displays the following KPIs:

PROFITABILITY METRICS

- **Revenue YTD:** Total revenue from the beginning of the fiscal year to today
- **Gross Margin:** Revenue minus direct costs (COGS)
- **EBITDA:** Earnings before Interest, Taxes, Depreciation, and Amortization
- **Operating Margin %:** EBITDA as a percentage of revenue

LIQUIDITY & CASH FLOW

- **Cash Available:** Current balance in all bank and cash accounts
- **Cash Forecast 90d:** Projected cash position in 90 days
- **Monthly Burn Rate:** Average monthly cash consumption
- **Runway:** Number of months until cash runs out at current burn rate

RISK INDICATORS

- **DSO (Days):** Average days to collect payment from customers
- **DPO (Days):** Average days taken to pay suppliers
- **Overdue Rate %:** Percentage of receivables that are past due
- **Customer Concentration:** Percentage of revenue from largest customer

3.3 Refreshing Data

The dashboard data is automatically calculated in the background. However, if you have just posted new invoices or transactions and want to see updated metrics immediately:

1. Click the "Refresh" button in the top right corner of the dashboard
2. Wait 3-5 seconds while the system recalculates all metrics
3. The dashboard will display the updated values

Tip: KPIs are also recalculated automatically every night at 2 AM. For most purposes, the automatic updates are sufficient.

3.4 Interpreting Metrics

Understanding what the metrics tell you:

- **Green trends:** Generally indicate positive performance (increasing revenue, improving margins)
- **Red trends:** May indicate areas requiring attention (declining margins, rising DSO)
- **High DSO:** Customers taking longer to pay - may indicate collection issues
- **Negative Burn Rate:** Company consuming more cash than generating - monitor runway closely
- **High Customer Concentration:** Over-dependence on single customer increases business risk

4. Cash Flow Forecast

4.1 Overview

The Cash Flow Forecast Engine provides intelligent predictions of your cash position for the next 180 days. Unlike simple projections that just look at due dates, this engine uses machine learning to predict when customers will actually pay and when you will actually pay suppliers, based on historical payment behavior.

4.2 Reading the Forecast

To access the detailed forecast, navigate to CFO Dashboard > Cash Flow Forecast.

The forecast displays:

- **Projection Date:** Each future date for which we have a projection
- **Expected Inflows:** Predicted cash coming in (customer payments, sales orders)
- **Expected Outflows:** Predicted cash going out (supplier payments, purchase orders)
- **Net Flow:** Inflows minus outflows for that day
- **Projected Balance:** Your expected cash position on that date

4.3 Understanding Scenarios

The system calculates three scenarios:

- **Realistic:** Based on actual historical payment patterns. This is your most likely outcome.
- **Optimistic:** Assumes customers pay 10% faster and you can delay supplier payments slightly. Best-case scenario.
- **Pessimistic:** Assumes customers pay 15% slower and you must pay suppliers on time. Worst-case scenario.

Recommendation: Plan your financial decisions based on the realistic scenario, but always keep an eye on the pessimistic scenario to ensure you have a buffer for worst-case situations.

4.4 Using Projections for Decision Making

Practical uses of the cash flow forecast:

- Determine when you can make large purchases or investments
- Identify when you may need to secure a line of credit
- Plan timing of discretionary expenses
- Negotiate payment terms with suppliers based on cash position

- Set appropriate credit terms for new customers
- Predict when you can afford to hire new staff

Example: If the forecast shows your cash will drop below \$50,000 in 45 days, you should start securing additional funding now rather than waiting until you face a crisis.

5. Profitability Analysis

5.1 Multi-Dimensional Analysis

The Profitability Analysis tool lets you understand which parts of your business are actually profitable. You can analyze margins across multiple dimensions:

- By Product: Which products have the highest margins?
- By Customer: Which customers are most profitable?
- By Salesperson: Which sales team members bring in the most profitable deals?
- By Project: Which projects are worth pursuing?
- By Category: Which product categories perform best?

5.2 Filtering by Dimension

To analyze profitability by a specific dimension:

1. Navigate to CFO Dashboard > Profitability Analysis
2. Use the "Group By" dropdown to select your dimension (Product, Customer, etc.)
3. The system will display margins for each item in that dimension
4. Click on any row to drill down into detailed transactions
5. Use the date filters to analyze specific time periods

5.3 Understanding Margin Calculations

The system calculates several types of margins:

- **Gross Margin:** Revenue - Direct Costs (COGS). Shows basic profitability before overhead.
- **Net Margin:** Revenue - Direct Costs - Allocated Indirect Costs. Shows true profitability.
- **Contribution Margin:** Revenue - Variable Costs. Shows contribution to fixed costs.
- **Gross Margin %:** $\text{Gross Margin} / \text{Revenue} \times 100$. Percentage profitability.

Note: The system uses your product costing method (Standard, FIFO, or AVCO) as configured in Odoo to calculate direct costs.

5.4 Export and Reporting

You can export any profitability analysis to Excel for further analysis:

1. Configure your desired filters and grouping
2. Click the "Export" button (top right)

3. Select "Export All Data" to include all records
4. Open the downloaded Excel file for detailed analysis

6. Risk Management

6.1 Risk Scoring System

The system automatically calculates a risk score (0-100) for each customer and supplier based on their payment behavior. Higher scores indicate higher risk.

Risk Score Components:

- Payment Delay History (0-40 points): Based on average days late
- Frequency of Overdue Invoices (0-30 points): How often they pay late
- Total Amount Outstanding (0-30 points): Size of current overdue balance

Risk Levels:

- Low Risk (0-49): Reliable payment history, no action needed
- Medium Risk (50-79): Some payment delays, monitor closely
- High Risk (80-100): Significant payment issues, immediate action required

6.2 DSO and DPO Metrics

DSO (Days Sales Outstanding): Measures how long it takes to collect payment from customers.

Formula: $(\text{Total Receivables} / \text{Total Credit Sales}) \times \text{Number of Days}$

What DSO tells you:

- DSO of 30 days = customers pay on average in 30 days
- Lower DSO = faster payment collection (better)
- Rising DSO = collection problems developing
- Industry benchmark: 30-45 days for most B2B businesses

DPO (Days Payable Outstanding): Measures how long you take to pay suppliers.

What DPO tells you:

- Higher DPO = you retain cash longer (can be good for cash flow)
- Too high DPO = may damage supplier relationships
- Balance: Match DPO to your payment terms to maintain good relationships

6.3 Managing Customer Risk

When you identify high-risk customers, consider these actions:

- Request payment upfront or shorten payment terms
- Implement credit limits to cap exposure
- Require personal guarantees for large orders
- Consider credit insurance for very large customers
- Move to cash-on-delivery terms
- Escalate collection efforts proactively

6.4 Taking Action on Alerts

Navigate to CFO Dashboard > Alerts to see all active risk alerts. Each alert includes:

- Alert Type (DSO high, customer risk, etc.)
- Severity Level (Info, Warning, Critical)
- Current Value vs. Threshold
- Recommended Action

You can acknowledge alerts after taking action, or resolve them when the issue is fixed.

7. Multi-Company Consolidation

7.1 Setting Up Consolidation

If your organization has multiple companies in Odoo, you can consolidate their financial results to see group-level performance.

Setup steps:

1. Navigate to CFO Dashboard > Configuration
2. Enable "Multi-Company Consolidation"
3. Select the intercompany accounts to eliminate
4. Save the configuration

7.2 Running Consolidation Reports

To create a consolidated report:

1. Navigate to CFO Dashboard > Consolidation
2. Click "Create New Consolidation"
3. Select the companies to consolidate
4. Choose the start and end dates for the period
5. Click "Compute Consolidation"
6. Review the consolidated results

7.3 Understanding Consolidated Metrics

The consolidation process automatically:

- Sums revenue and expenses across all selected companies
- Eliminates intercompany transactions to avoid double-counting
- Converts all currencies to the consolidation currency
- Calculates group-level KPIs (margins, ratios, etc.)

Note: Ensure your intercompany accounts are properly configured to get accurate consolidated results.

8. Alerts and Notifications

8.1 Alert Types

The system monitors six critical alert conditions:

- **Cash Negative Projected:** Forecast shows negative cash balance in future
- **High DSO:** Days Sales Outstanding exceeds your threshold
- **Low Margin:** Profit margins falling below acceptable levels
- **Critical Burn Rate:** Monthly cash consumption too high
- **Customer Risk:** High-risk customer identified
- **Customer Concentration:** Over-dependence on single customer

8.2 Configuring Thresholds

To customize alert thresholds:

1. Navigate to CFO Dashboard > Configuration
2. Scroll to "Alert Thresholds" section
3. Set your desired thresholds for each alert type
4. Click Save

Recommended thresholds:

- DSO: 45 days (adjust based on your industry)
- Burn Rate: -\$10,000/month (adjust to your business size)
- Margin: 20% minimum (adjust to your industry)
- Customer Concentration: 30% maximum

8.3 Managing Alerts

When you receive an alert:

1. Review the alert details to understand the issue
2. Check the current value vs. threshold
3. Take appropriate corrective action
4. Mark the alert as "Acknowledged" after reviewing
5. Mark as "Resolved" once the issue is fixed

Alerts are checked automatically every 6 hours. You will receive both in-app notifications and email alerts (if configured).

9. Configuration

9.1 General Settings

Access configuration at CFO Dashboard > Configuration (requires Manager permissions).

General settings include:

- **Configuration Name:** Label for this configuration
- **Company:** Which company this configuration applies to
- **Auto Monthly Snapshot:** Enable automatic KPI snapshots

9.2 Cash Flow Settings

Configure how cash flow forecasts are calculated:

- **Projection Days:** 180 (can be adjusted from 30-365 days)
- **Payment Delay Method:** Weighted average recommended for most businesses
- **Optimistic Factor:** 10% (how much better than realistic)
- **Pessimistic Factor:** -15% (how much worse than realistic)

9.3 Alert Thresholds

Set when you want to be notified:

- **Burn Rate Alert:** Trigger when monthly cash consumption exceeds this amount
- **DSO Alert:** Trigger when Days Sales Outstanding exceeds this number
- **Margin Alert:** Trigger when margins fall below this percentage
- **Concentration Alert:** Trigger when single customer exceeds this % of revenue

9.4 Profitability Settings

Configure how profitability is calculated:

- **Indirect Cost Method:** Choose: % of revenue, % of cost, fixed amount, or analytic
- **Indirect Cost %:** Percentage to apply (typically 10-20%)

10. Best Practices

Maximize value from your CFO Dashboard:

DAILY HABITS

- Check Executive Cockpit first thing each morning
- Review any new alerts that appeared overnight
- Glance at cash forecast to ensure no surprises ahead
- Monitor burn rate if cash is tight

WEEKLY HABITS

- Review profitability by customer to identify issues
- Check risk scores for any newly flagged customers
- Analyze DSO trends - take action if rising
- Review cash flow scenarios for next 30 days

MONTHLY HABITS

- Export profitability analysis for detailed review
- Compare actual vs. forecasted cash flow from last month
- Review and adjust alert thresholds if needed
- Run consolidation reports (if multi-company)
- Create board report for management presentation

DATA QUALITY TIPS

- Ensure all invoices are posted promptly
- Keep customer and supplier master data current
- Regularly reconcile bank accounts
- Update product costs when they change
- Review and correct any obvious data errors immediately

11. Troubleshooting

Common issues and solutions:

Dashboard shows no data or zeros

Possible causes:

- No invoices have been posted yet
- Invoices are in draft state instead of posted
- Cron jobs have not run yet (wait until 2 AM next day)

Solution: Post some invoices, then click Refresh on the dashboard.

Cash flow forecast shows unrealistic numbers

Possible causes:

- Insufficient payment history for prediction
- Recent major one-time transactions skewing averages
- Missing due dates on invoices

Solution: Review forecast configuration and ensure invoice due dates are set.

Profitability analysis shows incorrect margins

Possible causes:

- Product costs not updated in Odoo
- Wrong costing method selected
- Indirect cost allocation not configured

Solution: Update product costs and check profitability configuration.

Not receiving alert notifications

Possible causes:

- Email not configured in Odoo
- Alert thresholds set too high/low
- User notifications disabled

Solution: Check Odoo email settings and alert configuration.

Dashboard loads slowly

Possible causes:

- Very large transaction volume (millions of lines)
- Server resource constraints
- Cron jobs running simultaneously

Solution: Contact support for performance optimization assistance.

12. Frequently Asked Questions

Q: How often is data updated?

A: The dashboard refreshes every 5 minutes while open. Background calculations run daily at 2 AM. You can also manually refresh anytime.

Q: Can I customize which KPIs are shown?

A: The current version displays a fixed set of KPIs. Contact support for custom KPI development.

Q: Does this work with Odoo Community Edition?

A: Yes! The module is fully compatible with both Community and Enterprise editions.

Q: How accurate is the cash flow forecast?

A: Accuracy improves over time as the system learns payment patterns. Typical accuracy is 85-95% after 3 months of data.

Q: Can I export data to Excel?

A: Yes, all views support Excel export using the Export button.

Q: What happens after 12 months of updates?

A: The module continues working. Updates are optional and available for €149/year.

Q: Can I use this for multiple companies?

A: Yes, the module includes multi-company consolidation features.

Q: How do I get the source code?

A: The complete source code is included with your purchase - it is the module itself.

Q: What if I need help?

A: Email support@smartbusiness-solutions.com - response within 48 hours guaranteed.

Q: Can I modify the code?

A: Yes, for internal use. Redistribution requires separate licensing.

13. Support and Contact

We are committed to your success with the CFO Dashboard. Help is available through multiple channels.

TECHNICAL SUPPORT

Email: support@smartbusiness-solutions.com

Response Time: Within 48 hours (business days)

Hours: Monday-Friday, 9 AM - 6 PM CET

Languages: English, French

SALES INQUIRIES

Email: sales@smartbusiness-solutions.com

For: Bulk licensing, partnerships, custom development

BEFORE CONTACTING SUPPORT

Please have ready:

- Your Odoo version
- Screenshot of any error messages
- Steps to reproduce the issue
- What you expected vs. what happened
